Exam: Exam 2 - Loops and Conditions

Q1. What does a loop do in a program? It is used when we need to repeat the same instructions many times without rewriting them.
A) Repeats a block of code
B) Stops the program
C) Draws a shape
D) Deletes a file
Answer: A
Explanation: A loop repeats the same block of code, so you do not have to write it again and again.

Q2. How many times does this loop print?
Code:

```
for i in range(3):
    print(i)
```

A) 2
B) 3
C) 4
D) 5
Answer: B
Explanation: range(3) gives 0, 1, 2, so print runs 3 times.

Q3. Which symbol checks if two values are equal in Python?
A) =
B) ==
C) !=
D) =>
Answer: B
Explanation: A single = stores a value. Two equal signs == compare values.
